SUMMARY

Senior iOS Developer and Team Lead with 10+ years of production experience designing, building and optimizing native iOS apps — from real-time, Bluetooth-controlled firing systems to social, fintech and enterprise products. Expert in Swift, SwiftUI, UIKit, Combine, Core Bluetooth (BLE) and real-time processing, with a track record of leading teams, owning the App Store release pipeline, and shipping products people rely on daily. Also build React / Next.js web front-ends.

CORE SKILLS

Swift · SwiftUI · UIKit · Combine · Swift Concurrency · Core Bluetooth (BLE) · MVVM · TCA · VIPER · Clean Architecture · SPM
REST · GraphQL · Alamofire · Core Data · SwiftData · CloudKit · Firebase · Crashlytics · AppStore Connect · TestFlight · Xcode Cloud
App Store Connect · TestFlight · XCTest · Snapshot · Instruments · React · Next.js · TypeScript

EXPERIENCE

IGNITE Firing Systems — Senior iOS Developer & Team Lead

Nov 2018 – Present · USA · Remote | Impact: <300ms fail-safe firing latency · +30% client revenue from automation · led & mentored the iOS team

Own the architecture and delivery of IGNITE, PyroCast and TNT — apps that fire real fireworks over Bluetooth with life-safety-grade reliability. Set technical direction, mentor the iOS team, and run the CI/CD and App Store release pipeline end-to-end.

- **Real-time BLE firing engine (sub-300ms):** Core Bluetooth (GATT) control of firing modules with fail-safe misfire protection on a deterministic paused-timeline scheduler; Multiplexer Connectivity / WebSocket fallbacks and background BLE state restoration.
- **SwiftUI + Combine → Swift Concurrency:** migrated core flows from UIKit, then to async/await and actors; Core Graphics / Metal firing-sequence visualizer.
- **Analytics, attribution & crash monitoring:** Firebase Analytics + Crashlytics (crash-free-users as a release gate); AppStore Connect for paid-social install attribution and OneLink deferred deep linking; Remote Config flags.
- **Revenue-driving automation:** automated firework sequencing that lifted client revenue ~30%.

CI/CD & Fastlane: Fastlane lanes (beta/release/screenshots) + match code signing · Bitrise + Xcode Cloud → TestFlight · App Store Connect API for headless build/version bumps · changelog from PRs.

App Store config: phased release & staged rollout · TestFlight groups · App Privacy labels + ATT · entitlements/capabilities (background modes, push, associated domains) · App Review handling.

Code quality & PRs: trunk-based Git · SwiftLint + SwiftFormat in CI · green-CI + peer approval before squash-merge · mentoring via reviews.

Testing & performance: XCTest + snapshot tests · Instruments (Time Profiler, Allocations, Leaks) · cold-launch/memory tuning.

Stack: Swift · SwiftUI · UIKit · Combine · Swift Concurrency · Core Bluetooth · Multiplexer · WebSockets · MVVM · TCA · SPM · Firebase · Crashlytics · AppStore Connect · Fastlane · Bitrise · Xcode Cloud · XCTest

DPL — Senior iOS Developer

Aug 2017 – Oct 2018 · Pakistan

Built TalkBack, a social news app for trending local stories, and improved the Alif Elan app; modernized the codebase and integrated the real-time backend, push and deep-linking a social product needs.

- **Modern MVVM + Codable networking:** Swift 4 with MVVM + coordinators; migrated from AFNetworking/RestKit to Alamofire + URLSession with Codable; Core Data caching (NSFetchedResultsController) for offline feeds.
- **Real-time content & push:** Firebase (Firestore, Auth, Cloud Messaging) for live content and push re-engagement.
- **Deep links & retention:** Firebase Dynamic Links / Branch for shareable story links; engagement funnels in Firebase Analytics; Instruments-tuned feed scrolling (SDWebImage).

Stack: Swift 4 · UIKit · MVVM · Alamofire · Codable · Core Data · SDWebImage · Firestore · Firebase Auth · Cloud Messaging · Dynamic Links / Branch · Fastlane · TestFlight · CocoaPods

Ifisol — iOS Developer

Nov 2016 – Sep 2017 · Pakistan

Developed the Attendo employee-management app serving thousands of employees, and owned enterprise distribution end-to-end.

- **Attendance at scale:** Swift 3 + UIKit with Core Data local storage and a REST sync layer (AFNetworking); APNs push reminders and background fetch.
- **Enterprise distribution ownership:** Ad Hoc, in-house Enterprise (.ipa) and App Store builds — certificates, provisioning profiles and entitlements, with frequent OTA updates.
- **Monitoring:** Fabric Crashlytics and Google / Firebase Analytics.

Stack: Swift 3 · Objective-C · UIKit · Core Data · AFNetworking · REST · APNs · Fabric Crashlytics · CocoaPods

Binex Solutions — iOS Developer (Part-time)

Aug 2015 – Nov 2016 · Pakistan

Contributed to several business apps, integrating ad networks and REST APIs — where I built the iOS fundamentals everything since has been built on.

- Objective-C & early Swift (2.x/3), UIKit with Storyboards/XIBs and Auto Layout, ARC memory management.
- Monetization via AdMob and Chartboost; REST via AFNetworking; Core Data persistence; CocoaPods, Git, Apple HIG, Agile/Scrum.

Stack: Objective-C · Swift 2/3 · UIKit · AFNetworking · Core Data · AdMob · Chartboost · CocoaPods · Git

EDUCATION

BSCS — Bachelor of Computer Science

SZABIST University · Islamabad, Pakistan · 2012 – 2016

Core coursework in Data Structures & Algorithms, OOP, Databases, Operating Systems, Computer Networks and Software Engineering. Built the first iOS projects that set the direction for the career.

SELECTED APPS

- **IGNITE Firing Systems** (iOS, real-time BLE, 4.9★) — [App Store](#) · [Site](#)
- **PyroCast** (iOS, firing companion) — [App Store](#)
- **Social Detox** (iOS, Screen Time / Family Controls) — [App Store](#)
- **Attendo Plus** (iOS + web, attendance) — [App Store](#) · [Site](#)
- **Spent** (iOS, voice-first expenses) — [App Store](#)
- **GuardsPro** (security workforce, live GPS) — [Site](#)
- **Roamie Travel** (AI trip planner, web) — [Site](#)
- **DietPal** (nutrition, web) — [Site](#)
